THE POWER OF UBUNTU MEETS THE BEAUTY OF GNOME.
Ubuntu GNOME is an official flavor of Ubuntu, featuring the GNOME desktop environment. Ubuntu GNOME is a mostly pure GNOME desktop experience built from the Ubuntu repositories. Three years ago, Ubuntu GNOME started as unofficial flavor to Ubuntu – see the release notes of 12.10 – and 6 months after that, Ubuntu GNOME has become an official flavor.
Fast forward to today, and we are proud to announce the release of 15.10. This is our Non-LTS Release. If you seek stability and long support, please consider Ubuntu GNOME 14.04 (Trusty Tahr) LTS Release. If you want the latest software/packages that we can offer, then give
ad 64-bit
LIGHTWEIGHT.
Ubuntu GNOME runs on the GNOME Shell, a fast and lightweight desktop environment. It runs great on a variety of hardware, and the minimum requirements include only a 1GHz processor and 1.5GB of RAM.
See how fast
POWERFUL.
It also comes with all the default packages of Ubuntu. Whether you need to do development, word processing, graphics work, or simply browse the web, there is plenty of free software to go around.
See it in action
OPEN SOURCE.
Best of all, the entire Ubuntu GNOME project is open source and entirely community driven. Want to see a change made in the way it works? All of the code is publicly available and ready to be modified.
How to contribute
A BEAUTIFUL DESKTOP.
Every part of GNOME 3 has been designed to make it simple and easy to use. The Activities Overview is an easy way to access all your basic tasks. A press of a button is all it takes to view your open windows, launch applications or check if you have new messages. Having everything in one place is convenient and means that you don't have to learn your way around a maze of different technologies.
Plus with Tweak Tool, you've got full customization over everything inside of GNOME. You can change themes, colors, even scaling for hi-res displays. You can also download community made extensions or create your own to add additional features and functionality to your desktop environment.

A BEAUTIFUL DESKTOP.
Every part of GNOME 3 has been designed to make it simple and easy to use. The Activities Overview is an easy way to access all your basic tasks. A press of a button is all it takes to view your open windows, launch applications or check if you have new messages. Having everything in one place is convenient and means that you don't have to learn your way around a maze of different technologies.
Plus with Tweak Tool, you've got full customization over everything inside of GNOME. You can change themes, colors, even scaling for hi-res displays. You can also download community made extensions or create your own to add additional features and functionality to your desktop environment.
DO MORE WITH GNOME SOFTWARE!
GNOME Software lets you browse and install thousands of free and paid applications available for Ubuntu. You can view available software by category, or search quickly by name or description. You can also view the software packages already installed, and remove items you no longer need. GNOME Software keeps all of your packages up to date, and makes software and operating system upgrades a breeze.
You can even expand the software center by adding your own custom and community managed repositories. Best of all, the vast majority of software is completely free and open source.

WHY UBUNTU?
Ubuntu is a Debian-based Linux operating system and distribution for personal computers, smartphones and network servers. It's based on free software and named after the Southern African philosophy of ubuntu (literally, "human-ness"), which often is translated as "humanity towards humanity." Ubuntu is backed by Canonical, making it the most commercially supported distribution of Linux on the planet.

WHY GNOME?
GNOME is an easy and elegant way to use your computer. It is designed to put you in control and bring freedom to everybody. GNOME 3 is developed by the GNOME community, a diverse, international group of contributors that is supported by an independent, non-profit foundation. It began as the official desktop environment for Debian, but is now freely distributed across a number of different Linux distros.

FREE OFFICE APPS FOR ALL.
Ubuntu GNOME comes pre-installed with LibreOffice 5, a powerful office suite; its clean interface and its powerful tools let you unleash your creativity and grow your productivity. Gone are the days of needing to pay for your office suite, as LibreOffice is completely free, to use forever.
LibreOffice embeds several applications that make it the most powerful Free & Open Source Office suite on the market. Process text documents, create and edit spreadsheets and database files, make presentations, even edit images. Best of all, its completely free, and even works with existing files from other office suites. PDF, DOC, XLSX, CSV, & PPT are all compatible.

What is CombatLAN?
CombatLAN is a PC gaming focused community in the southeast Ohio region. We regularly play games together on our self-hosted community servers, and host multiple LAN parties throughout the year. Anyone is welcome to join the official Discord chat, community forums, or to join us in game. Additionally, we welcome all to participate in our LAN party events.
What goes on at a CombatLAN LAN party event? I'm glad you asked! Essentially, we rent out a space for the weekend and fill it up with folding 6-foot tables. CombatLAN is a BYOC (bring you' own computer) event, so up to 48 people will show up with their gaming rigs/consoles, set up at their reserved seats, and link up with the internal network. From there, we have a private text/voice chat via Discord for smack-talk, and a plethora of LAN servers to play on. The entire event is free-play, meaning there are no limitations on what games you can't play. Singleplayer, co-op, splitscreen, LAN multiplayer, online multiplayer, doesn't matter!
CombatLAN v4.0 Trailer - Our Largest LAN Party Yet!
New Website Under Heavy Development
Just wanted to make a very brief post teasing what is to come. CombatLAN is (finally) going to be receiving a proper website overhaul. As a web developer myself, this was a long, time coming and something that should have been done a while ago. I apologize for the delay, but thankfully I've had some spare time to work on this recently.

New CombatLAN Sponsor - Thermaltake
CombatLAN is proud to announce yet another sponsorship! After running my main rig in their Suppressor F31 case (which is one of the best deals on a silent case, period) for over 6 months now, I can personally vouch for these guys and their products.

Official Minecraft Server Now Live
After quite a large community demand, we now have an official Minecraft server up and running! Once again, this one is locally hosted and completely under our control. We will be running vanilla Minecraft for the immediate future, and the server will allow you to seamlessly transition between both Creative and Survival modes. We plan on adding a number of Minecraft mods to this server in the coming weeks.
